Bonus 2 — 7 SuiteDash Automation Recipes

Status: v1 recipe scaffolds. These are production-minded patterns, not verified import files yet. Before packaging as importable JSON/config, test each recipe in a SuiteDash account and update the status below.

Recipe status

#	Recipe	V1 status	Import tested?
1	Paid Client Onboarding Kickoff	Drafted	No
2	Intake Form to Project Template	Drafted	No
3	Missing Intake Reminder	Drafted	No
4	Milestone Status Update	Drafted	No
5	Invoice Follow-Up / Payment Reminder	Drafted	No
6	Support Request Triage	Drafted	No
7	Testimonial Request Loop	Drafted	No

Recipe 1: Paid Client Onboarding Kickoff

Use when

A client pays or is marked won, and the next step should happen without a manual “now what?” email.

Trigger

- Invoice paid, OR
- Deal marked won, OR
- Manual admin action: “Start onboarding.”

Preconditions

- Contact/company exists.
- Package/service field exists.
- Onboarding project template exists.
- Welcome/access email template exists.

Actions

1. Update client status to `Onboarding`.
2. Assign onboarding project template.
3. Send welcome/access email.
4. Create internal kickoff review task.
5. Notify owner that onboarding has started.

Definition of done

- Client receives a clear next step.
- Owner receives an internal task.
- Project/template exists and is linked to the client.

Failure mode to watch

Do not trigger this before payment or a confirmed manual approval unless you intentionally onboard before payment.

Recipe 2: Intake Form to Project Template

Use when

You need form answers to create the work structure automatically.

Trigger

Client onboarding/intake form submitted.

Preconditions

- Intake form fields are mapped to contact/project data.
- Project template exists.
- Required fields are minimal and meaningful.

Actions

1. Create/update client record.
2. Save key answers to custom fields.
3. Assign the appropriate project template.
4. Attach or reference submitted files/answers.
5. Notify owner.

Definition of done

- Submission produces a usable project/task structure.
- Internal owner does not need to copy/paste form answers manually.

Failure mode to watch

If the project template branches into too many variations, split service types before automating.

Recipe 3: Missing Intake Reminder

Use when

A client has paid or started onboarding but has not completed the intake form.

Trigger

Client status is `Onboarding` and intake form is incomplete after 48 hours.

Preconditions

- Intake completion status field exists.
- Reminder email template exists.
- Owner is assigned.

Actions

1. Send client reminder with intake link.
2. Create internal follow-up task if still incomplete after 72 hours.
3. Notify owner if deadline is approaching.

Definition of done

- Client receives one clear reminder.
- Owner has visibility before the workflow stalls.

Failure mode to watch

Do not spam daily reminders. One client-facing reminder plus one owner escalation is enough for v1.

Recipe 4: Milestone Status Update

Use when

Clients ask “where are we?” because status is not visible.

Trigger

Project phase/milestone changes.

Preconditions

- Project template has named phases.
- Status update email/template exists.
- Client-facing status field/page exists if used.

Actions

1. Update client-facing status.
2. Send short progress notification.
3. Create next internal task if phase handoff is needed.
4. Log evidence of milestone completion.

Definition of done

- Client can tell what changed and what happens next.
- Internal owner knows the next action.

Failure mode to watch

Avoid sending low-value notifications for every tiny task. Trigger on phase/milestone changes, not micro-updates.

Recipe 5: Invoice Follow-Up / Payment Reminder

Use when

Payment status blocks onboarding or delivery.

Trigger

Invoice sent and unpaid after chosen interval, or due date approaching/past.

Preconditions

- Invoice/payment module is used for the workflow.
- Payment status is visible on client record.
- Reminder language is approved.

Actions

1. Send payment reminder.
2. Update payment follow-up status.
3. Create internal task if overdue.
4. Pause onboarding/delivery automation if payment is required before work starts.

Definition of done

- Payment block is visible.
- Client receives a clear path to pay.
- Internal owner knows whether to proceed or pause.

Failure mode to watch

Do not pause mission-critical client work automatically unless the business policy is explicit.

Recipe 6: Support Request Triage

Use when

Clients need one structured place to request help instead of sending scattered emails/texts.

Trigger

Support/request form submitted or ticket created.

Preconditions

- Support form has category, urgency, description, and attachment fields.
- Owner or queue assignment rules exist.
- SLA expectation is defined.

Actions

1. Create support task/ticket.
2. Categorize by issue type.

3. Assign owner/queue.
4. Send client acknowledgment.
5. Escalate if unresolved by SLA threshold.

Definition of done

- Request has an owner.
- Client receives acknowledgment.
- Urgent requests are not buried.

Failure mode to watch

Do not build a full help desk if the business only receives occasional requests. A structured form + task may be enough.

Recipe 7: Testimonial Request Loop

Use when

A project or onboarding flow reaches a successful outcome and you need proof for the sales page.

Trigger

Project marked complete, milestone achieved, or 30 days after purchase/completion.

Preconditions

- Completion status exists.
- Testimonial request template exists.
- Permission language is included.

Actions

1. Send testimonial request.
2. Ask for a specific before/after statement.
3. Create internal task to review response.
4. Save usable quote to testimonial bank.

Definition of done

- Client is asked at the right moment.
- Response gets captured in a reusable location.

Failure mode to watch

Do not fabricate proof. If no response exists, keep the sales page testimonial blocker open.

Packaging notes

For v1, these can ship as a readable recipe pack. For v2 / SuiteDash Operator Pack, convert into importable or copy-paste configuration templates after live testing.

Version: v1 operator edition. SuiteDash is referenced as the product subject; this package is not official SuiteDash documentation or a replacement for SuiteDash support.
